

8:25 - keep a change log. We want to know they are up to date and reflect the current reality.

8:26 - if the architectural notebook says why it was changed, it's fine to be changed.

8:36 - we may be working a little bit too independently, good to have 2 people working in an area. Something to be fixed come next semester.

8:38 - we want to get implementation things done by the end of the weekend.

8:40 - wire frames and nav maps, other groups must use wireframe because they didn't have a clear idea about what use cases and UI they needed.

8:42 - (add on to above comment) how many screens and what their functionality is going to be. nailing down use cases and what UI elements do we need to support the use cases. He doesn't want it, but he thinks that we need it "I think it's necessary".

8:49 - UATs and FATs are the same thing. With FATs developers can do them, it's not until the final stages, all we got to do for LCAM is to show him test results that support the use case.

8:56 – it can't hurt to get special consideration, just mention COVID (recommended by Jim). Try to get it in by the 22nd no need to panic if it goes over. Cannot be later than the start of next semester.

9:00 – if it hasn't been submitted by the 22nd then we should do another meeting (already written down to do one on the 22nd anyway).
