

Oversight Meeting - 28/07/20

8:00pm - Recap of iteration from the team members.

8:05pm - Jim says good progress overall, as we got through a lot of work. Comments that we took on a lot this iteration

8:10pm - Benn explains where the payment gateway is at progress wise and how he is finding difficulty with it.

8:15pm - Emily gives overview of her progress with push notifications and how it should work with tokens for each user.

8:20pm - Jim advises us that we should bring the risky items forward this iteration. His recommendation is to escalate the payment gateway and possibly push notifications. This would mean assigning Jake and Jacob to these jobs too to try and complete them sooner and mitigate the risk. He mentions Project Plan is not rigid, and advises that the Menu functions for the Manager can be pushed back as they are more straightforward. He also recommends bringing the queueing system forward as this could be tricky and has risk attached to it.

8:30pm - Jacob starts to set up the project so he can share the screen and give a demo for Jim.

8:36pm - Jim mentions looking into a previous year's project as one group did implement a payment gateway.

8:38pm - Jacob gives a demo of the 'empty cart' feature on the Customer App.

8:40pm - Jacob gives a demo of the 'book delivery' feature on the Customer App.

8:43pm - Jim finds the previous year's project that has the payment gateway - 'Rentalhood'. The payment gateway looks to be Stripe and it appears the project is coded in Python. Jim advises us to get in touch with him by Friday if we haven't heard back, as he will look into this more for us.
