Looking good, plan is solid

Only issue:

- when there is a deviation note down why,

- Possibly add a deviation section before the assessment part.

- Just explain what happened and why we decided to do what we did.

How are we going to make this a package sale:

- Sell them a prepackaged container that is configurable to their local area.
- Make is customisable for the client to make it theirs
-
Programming documentation:

- How we are going to deploy and maintain it

User Manual:

- Appropriate help to provide different types of users
- Maybe have a link to a help
- Or help icons
- Probably embedded in the app is more appropriate
