Beverage Booker

Testing Manifest

Version Information

Version	Date	Remarks	Author
1.0	02/10/20	Testing Manifest - IOCM created	Benn Curby
1.1	02/10/20	Customer App - Sign Out & Browse Menu test results added.	Benn Curby
1.2	03/10/20	Customer App - View Cart View Account & View Order test results added.	Benn Curby
1.3	04/10/20	Customer App - FIll Cart, Empty Cart & Place Order (CCRD) test results added.	Benn Curby
1.4	05/10/20	Staff App - Manage Staff, Staff Login, View Active Order, Fill Order (CCRD), View Delivery & Deliver Order test results added.	Benn Curby
1.5	06/10/20	Staff App - Browse Menu, Add Menu Item, Edit Menu Item & Delete Menu Item test results added.	Benn Curby
1.6	06/10/20	Staff App - View & Update Inventory test results added.	Benn Curby
1.7	07/10/20	Dedicated testing results website created.	Benn Curby

1.8	09/10/20	Alpha Testing UATs added. Deployment testing added.	Benn Curby
2.0	09/10/20	Links to dedicated testing results website added. Testing Manifest ready for submission.	Benn Curby
2.1	25/10/20	Updated name of document to Beverage Booker PRM Testing Manifest Added test results for the Transition Iteration 1 UAT. This UAT was to test the updates made to version 1.0 of our app after receiving the results for the 1st round of beta testing.	Benn Curby

Please Read:

Our Testing Manifest provides an overview of what tests were carried out and the outcomes for each test.

For all our automated testing the results were exported in HTML format.

To display results in the clearest format, we have constructed a dedicated website for testing results. While the manifest does document each test, the easiest way to navigate and view test results in more detail is through the website. The website also has the PDF document for each Alpha UAT embedded in the website.

The Postman server tests are especially detailed, and you can click through the results to view things such as what tests passed, the different run iterations, as well as results and data for each individual test.

Beverage Booker Test Results Website

Use-Case: Create User

Test Collection - InstrumentedCreateUserTest

Tester: Benn Curby

Description:
This Android instrumented test collection tests normal and alternate flows for a user trying to create an account on the Customer App.

Pre-conditions:
1. The user cannot already exist in the database.
2. The connection to the server is stable.

Results:

a_IsCreatUserFieldsDisplayed

Description:
This test within the Android instrumented test collection tests whether all the fields are displayed correctly on the Create User page of the Customer App.

Post-conditions:
All the fields are displayed correctly.

Result: Passed

b_IsUserCreatedWithEmailEmpty

Description:
This test within the Android instrumented test collection tests whether a user is created when the email field is empty.

Post-conditions:
The new user is not created and an error message is displayed over the empty email field.

Data required:

Email: \<empty\>
Password: 123456
First Name: Jane
Last Name: Doe
Phone: 0402555444

Result: Passed

c_IsUserCreatedWithPasswordEmpty

Description:
This test within the Android instrumented test collection tests whether a user is created when the password field is empty.

Post-conditions:
The new user is not created and an error message is displayed over the empty password field.

Data required:

Email: janedoe@gmail.com
Password: **<empty>**
First Name: Jane
Last Name: Doe
Phone: 0402555444

Result: **Passed**

d_IsUserCreatedWithFirstNameEmpty

Description:
This test within the Android instrumented test collection tests whether a user is created when the first name field is empty.

Post-conditions:
The new user is not created and an error message is displayed over the empty first name field.

Data required:

Email: janedoe@gmail.com
Password: 123456
First Name: **<empty>**
Last Name: Doe
Phone: 0402555444

Result: **Passed**

e_IsUserCreatedWithLastNameEmpty

Description:
This test within the Android instrumented test collection tests whether a user is created when the last name field is empty.

Post-conditions:
The new user is not created and an error message is displayed over the empty last name field.

Data required:

Email: janedoe@gmail.com
Password: 123456
First Name: Jane
Last Name: **<empty>**
Phone: 0402555444

Result: **Passed**

f_IsUserCreatedWithPhoneEmpty

Description:
This test within the Android instrumented test collection tests whether a user is created when the phone field is empty.

Post-conditions:
The new user is not created and an error message is displayed over the empty phone field.

Data required:

Email: janedoe@gmail.com
Password: 123456
First Name: Jane
Last Name: Doe
Phone: **<empty>**

Result: **Passed**

g_IsUserCreatedWithEmailIncorrectFormat

Description:
This test within the Android instrumented test collection tests whether a user is created when the email is the incorrect format.

Post-conditions:
The new user is not created and an error message is displayed over the incorrectly formatted email field.

Data required:

Email: janedoe.com
Password: 123456
First Name: Jane
Last Name: Doe
Phone: 0402555444

Result: **Passed**

h_IsUserCreatedWithPasswordNotRequiredLength

Description:
This test within the Android instrumented test collection tests whether a user is created when the password is not the required length (minimum 6 characters).

Post-conditions:
The new user is not created and an error message is displayed over the password field.

Data required:

Email: janedoe@gmail.com
Password: 12345
First Name: Jane
Last Name: Doe
Phone: 0402555444

Result: **Passed**

i_IsUserCreatedWithValidData

Description:
This test within the Android instrumented test collection tests whether a user is created with valid data in all fields.

Post-conditions:
The new user is created.

Data required:

Email: janedoe@gmail.com
Password: 123456
First Name: Jane
Last Name: Doe
Phone: 0402555444

Result: Passed

Use-Case: Create User

Create User - Web Server Postman Tests

<u>Tester</u>: Benn Curby

<u>Description</u>:
This Postman test collection tests normal and alternate flows for a user trying to create an account on the Beverage Booker web server.

<u>Pre-conditions</u>:
1. The user cannot already exist in the database.
2. The connection to the server is stable.

<u>Results</u>:

Results and test data are exported from these tests in HTML and can be found at our dedicated test results website.

<u>Beverage Booker Test Results Website - Create User</u>

Use-Case: Log In

Test Collection - InstrumentedLoginTest

Tester: Benn Curby

Description:
This Android instrumented test collection tests normal and alternate flows for a registered user trying to login to an existing account on the Customer App.

Pre-conditions:
1. The user already exists in the database.
2. The user is not already logged in.
3. The connection to the server is stable.

Results:

a_IsLoginFieldsDisplayed

Description:
This test within the Android instrumented test collection tests whether all the fields are displayed correctly on the Login page of the Customer App.

Post-conditions:
All the fields are displayed correctly.

Result: Passed

b_IsUserLoggedInWithEmptyEmail

Description:
This test within the Android instrumented test collection tests whether a user is logged in when the email field is empty.

Post-conditions:
The user is not logged in and an error message is displayed over the empty email field.

Data required:

Email: \<empty\>
Password: 123456

Result: Passed

c_IsUserLoggedInWithEmptyPassword

Description:
This test within the Android instrumented test collection tests whether a user is logged in when the password field is empty.

Post-conditions:
The user is not logged in and an error message is displayed over the empty password field.

Data required:

Email: janedoe@gmail.com
Password: <empty>

Result: **Passed**

d_IsUserLoggedInWithInvalidEmailFormat

Description:
This test within the Android instrumented test collection tests whether a user is logged in when the email entered is incorrectly formatted.

Post-conditions:
The user is not logged in and an error message is displayed over the email field.

Data required:

Email: janedoe.com
Password: 123456

Result: **Passed**

e_IsUserLoggedInWithValidData

Description:
This test within the Android instrumented test collection tests whether a user is logged in with valid account data.

Post-conditions:
The user is logged into the Customer App.

Data required:

Email: janedoe@gmail.com
Password: 123456

Result: Passed

Use-Case: Login

Log In - Web Server Postman Tests

Tester: Benn Curby

Description:
This Postman test collection tests normal and alternate flows for a user trying to login on the Beverage Booker web server.

Pre-conditions:
1. The user already exists in the database.
2. The user is not already logged in.
3. The connection to the server is stable.

Results:

Results and test data are exported from these tests in HTML and can be found at our dedicated test results website.

Beverage Booker Test Results Website - Log In

Use-Case: Sign Out

Test Collection - InstrumentedTestForSignOut

Tester: Jake Durnford

Description:
This Android instrumented test collection tests normal and alternate flows for a registered user trying to sign out of an existing account on the Customer App.

Pre-conditions:
1. The user already exists in the database.
2. The user is already logged in.
3. The connection to the server is stable.

Results:

signOutOfMenuBar

Description:
This test within the Android instrumented test collection tests whether the sign out button is displayed correctly and also signs a user out using the menu bar of the Customer App.

Post-conditions:
The Sign Out button is displayed and the user signs out of the Customer App.

Data required:

Email: janedoe@gmail.com
Password: 123456

Result: Passed

signOutOfProfileActivity

Description:
This test within the Android instrumented test collection tests whether a user can sign out of the profile activity page.

Post-conditions:
The user is logged out successfully using the Profile Activity page.

Data required:

Email: janedoe@gmail.com
Password: 123456

Result: Passed

Test Collection - InstrumentedTestForSignOut (Updated)

Tester: Benn Curby

Description:
This updated Android instrumented test collection tests normal and alternate flows for a registered user trying to sign out of an existing account on the Customer App.

Pre-conditions:
1. The user already exists in the database.
2. The user is already logged in.
3. The connection to the server is stable.

BookDeliveryA_SelectDelivery

Description:
This test within the Android instrumented test collection tests whether a registered user can select delivery for an order in the Customer App.

Post-conditions:
User successfully selects 'delivery' and is taken to the address input page

Result: **Passed**

BookDeliveryB_SelectPickUp

Description:
This test within the Android instrumented test collection tests whether a registered user can select pick up for an order in the Customer App.

Post-conditions:
User successfully selects 'Pick Up' and is taken to the payment input page

Result: **Passed**

BookDeliveryC_FillOutInformation_ErrorAtNumber

Description:
This test within the Android instrumented test collection tests whether a registered user can book a delivery if there is an error at the street number input field on the address input page of the Customer App.

Post-conditions:
Error message is displayed over the number input field.

Result: Passed

BookDeliveryD_FillOutInformation_ErrorAtName

Description:
This test within the Android instrumented test collection tests whether a registered user can book a delivery if there is an error at the street name input field on the address input page of the Customer App.

Post-conditions:
Error message is displayed over the street name input field.

Result: Passed

Test Collection - InstrumentedBookDeliveryTest (Updated)

Tester: Benn Curby

Description:
This Android instrumented test collection tests normal and alternate flows for a user trying to place a delivery order in the Customer App.

Pre-conditions:
1. The user already exists in the database.
2. The connection to the server is stable.

Results: 13/09/20

a_IsFieldsForDeliveryInputDisplayed

Description:
This test within the Android instrumented test collection tests whether the delivery fields are displaying correctly on the address input page of the Customer App.

Post-conditions:
All address fields are displayed.

Result: Passed

b_IsEmptyUnitNumberAccepted

Description:
This test within the Android instrumented test collection tests whether an empty unit number field input is accepted when entering an address.

Post-conditions:
Delivery address without unit number is accepted.

Data required:

Unit Number: <empty>
Street Address: 17 Smith St

Result: Passed

c_IsValidUnitNumberAndStreetNameAccepted

Description:
This test within the Android instrumented test collection tests whether an address with a valid unit number and street address is accepted when entering an address on the address input page.

Post-conditions:
Delivery address with unit number is accepted.

Data required:

Unit Number: 1
Street Address: 17 Smith St

Result: Passed

d_IsInValidSymbolsStreetNameAccepted

Description:
This test within the Android instrumented test collection tests whether symbols are accepted in the street address input field on the address input page.

Post-conditions:
Error message is displayed over the street address input field.

Data required:

Unit Number: 1
Street Address: ?!#$

Result: Passed

e_IsEmptyStreetNameAccepted

Description:
This test within the Android instrumented test collection tests whether an empty street name field input is accepted when entering an address.

Post-conditions:
Error message is displayed over the street address input field.

Data required:

Unit Number: 1
Street Address: **<empty>**

Result: **Passed**

Test Collection - InstrumentedTestForPlaceOrder

Tester: Benn Curby

Description:
This Android instrumented test collection for buttons and fields being displayed correctly within the checkout page of the Customer App.
